Task Description:

Create 2 EC2 instances on 2 different regions and install nginx using terraform script.

<u>Output:</u>

```
Administrator: Command Prompt
  destroy       Destroy previously-created infrastructure

All other commands:
  console       Try Terraform expressions at an interactive command prompt
  fmt           Reformat your configuration in the standard style
  force-unlock  Release a stuck lock on the current workspace
  get           Install or upgrade remote Terraform modules
  graph         Generate a Graphviz graph of the steps in an operation
  import        Associate existing infrastructure with a Terraform resource
  login         Obtain and save credentials for a remote host
  logout        Remove locally-stored credentials for a remote host
  metadata      Metadata related commands
  modules       Show all declared modules in a working directory
  output        Show output values from your root module
  providers     Show the providers required for this configuration
  query         Search and list remote infrastructure with Terraform
  refresh       Update the state to match remote systems
  show          Show the current state or a saved plan
  stacks        Manage HCP Terraform stack operations
  state         Advanced state management
  taint         Mark a resource instance as not fully functional
  test          Execute integration tests for Terraform modules
  untaint       Remove the 'tainted' state from a resource instance
  version       Show the current Terraform version
  workspace     Workspace management

Global options (use these before the subcommand, if any):
  -chdir=DIR    Switch to a different working directory before executing the
                given subcommand.
  -help         Show this help output or the help for a specified subcommand.
  -version      An alias for the "version" subcommand.

E:\>terraform -version
Terraform v1.14.3
on windows_amd64

E:\>aws --version
aws-cli/2.32.14 Python/3.13.9 Windows/11 exe/AMD64

E:\>
```

```
Administrator: Command Prompt

Default region name [ap-south-1]: ap-south-1
Default output format [json]: json

E:\>terraform init
Initializing the backend...
Initializing provider plugins...
- Reusing previous version of hashicorp/aws from the dependency lock file
- Using previously-installed hashicorp/aws v5.100.0

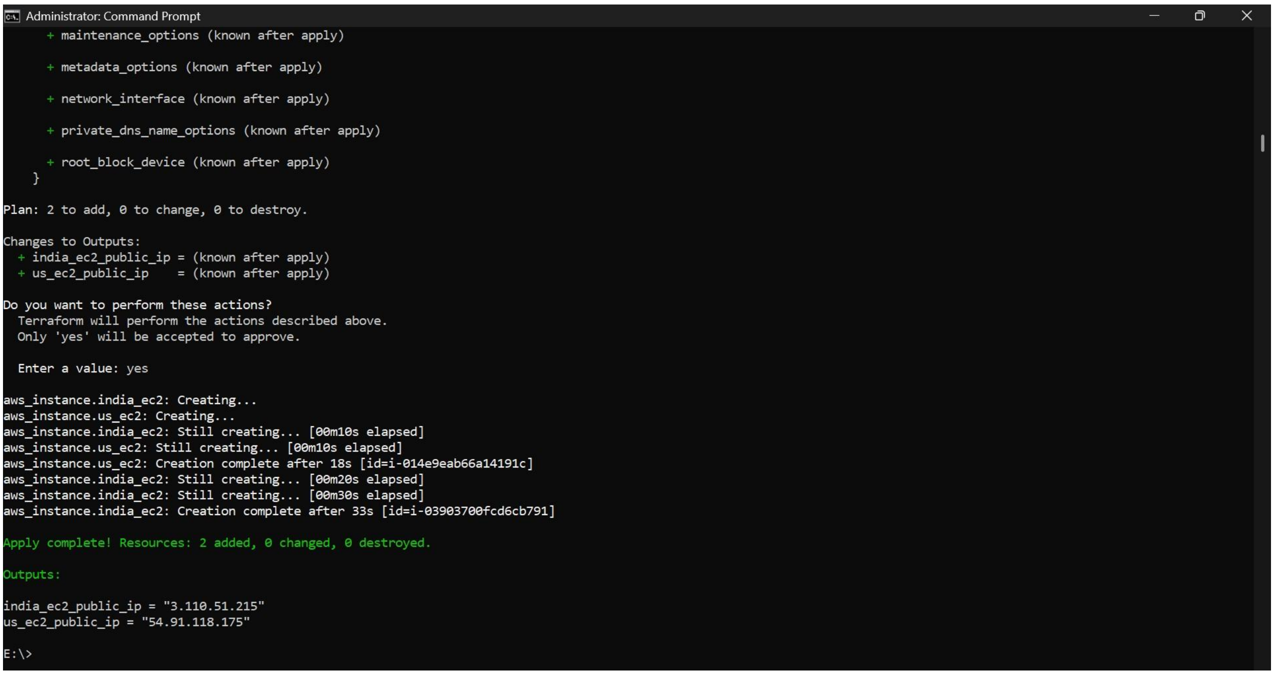
Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see
any changes that are required for your infrastructure. All Terraform commands
should now work.

If you ever set or change modules or backend configuration for Terraform,
rerun this command to reinitialize your working directory. If you forget, other
commands will detect it and remind you to do so if necessary.

E:\>terraform validate
Success! The configuration is valid.

E:\>
```



```
Administrator: Command Prompt
      + maintenance_options (known after apply)

      + metadata_options (known after apply)

      + network_interface (known after apply)

      + private_dns_name_options (known after apply)

      + root_block_device (known after apply)
    }

Plan: 2 to add, 0 to change, 0 to destroy.

Changes to Outputs:
  + india_ec2_public_ip = (known after apply)
  + us_ec2_public_ip    = (known after apply)

Do you want to perform these actions?
  Terraform will perform the actions described above.
  Only 'yes' will be accepted to approve.

  Enter a value: yes

aws_instance.india_ec2: Creating...
aws_instance.us_ec2: Creating...
aws_instance.india_ec2: Still creating... [00m10s elapsed]
aws_instance.us_ec2: Still creating... [00m10s elapsed]
aws_instance.us_ec2: Creation complete after 18s [id=i-014e9eab66a14191c]
aws_instance.india_ec2: Still creating... [00m20s elapsed]
aws_instance.india_ec2: Still creating... [00m30s elapsed]
aws_instance.india_ec2: Creation complete after 33s [id=i-03903700fcd6cb791]

Apply complete! Resources: 2 added, 0 changed, 0 destroyed.

Outputs:

india_ec2_public_ip = "3.110.51.215"
us_ec2_public_ip = "54.91.118.175"
