ubuntu@ip-172-31-42-39:~/Trend/terraform$ terraform init
Initializing the backend...
Initializing provider plugins...
- Reusing previous version of hashicorp/aws from the dependency lock file
- Using previously-installed hashicorp/aws v6.31.0

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see
any changes that are required for your infrastructure. All Terraform commands
should now work.

If you ever set or change modules or backend configuration for Terraform,
rerun this command to reinitialize your working directory. If you forget, other
commands will detect it and remind you to do so if necessary.
ubuntu@ip-172-31-42-39:~/Trend/terraform$ terraform validate
Success! The configuration is valid.
ubuntu@ip-172-31-42-39:~/Trend/terraform$
```

Terraform success:

The image shows a terminal window with a dark background. At the top, there is a header bar with the AWS logo, navigation icons, and user information: "Lakshmi Srinath (1775-9395-5230)" and "Lakshmi Srinath". The terminal content shows a Terraform plan for an AWS VPC and subnets. The plan lists resources like "aws_vpc.trend_vpc", "aws_subnet.trend_subnet", and "aws_security_group.trend_sg" with their respective configurations. Below the plan, the user is prompted to enter a value, and they respond with "yes". The terminal then shows the execution of the Terraform apply command, which successfully creates the resources. The final output shows the resources created and the user's prompt to run the command again.

Install Jenkins:

```

version.BuildInfo{Version:"v3.20.0", GitCommit:"b2e4314fa0f229a1de7b4c981273f61d69ee5a59", GitTreeState:"clean", GoVersion:"go1.25.6"}
ubuntu@ip-172-31-42-39:~/Trend$ helm repo add prometheus-community https://prometheus-community.github.io/helm-charts
"prometheus-community" has been added to your repositories
ubuntu@ip-172-31-42-39:~/Trend$ helm repo update
```

```
aws | Search [Alt+S] | Asia Pacific (Mumbai) | Lakshmi Srinath (1775-9395-5230) | Lakshmi Srinath

kube-prometheus-stack has been installed. Check its status by running:
  kubectl --namespace monitoring get pods -l "release=monitoring"

Get Grafana 'admin' user password by running:

  kubectl --namespace monitoring get secrets monitoring-grafana -o jsonpath="{.data.admin-password}" | base64 -d ; echo

Access Grafana local instance:

  export POD_NAME=$(kubectl --namespace monitoring get pod -l "app.kubernetes.io/name=grafana,app.kubernetes.io/instance=monitoring" -oname)
  kubectl --namespace monitoring port-forward $POD_NAME 3000

Get your grafana admin user password by running:

  kubectl get secret --namespace monitoring -l app.kubernetes.io/component=admin-secret -o jsonpath="{.items[0].data.admin-password}" | base64 --decode ; echo

Visit https://github.com/prometheus-operator/kube-prometheus for instructions on how to create & configure Alertmanager and Prometheus instances using the Operator.
